Dario Di Nucci is an assistant professor at the Jheronimus Academy of Data Science, a collaboration between Tilburg University and Eindhoven University of Technology. He received the European Ph.D. degree in Management & Information Technology from the University of Salerno in 2018, advised by Prof. Andrea De Lucia. His research is on empirical software engineering, in particular software maintenance and evolution and software testing. To this aim, he applies several techniques such as machine learning, search-based algorithms, and mining of software repositories. He is a work package leader in RADON, an H2020 project that provides an integrated development environment for serverless-based development. He serves as a program committee member of various international conferences and as a referee for various international journals in software engineering and artificial intelligence. Apart from research and teaching, he is involved in dissemination and exploitation activities. He is a member of the TOSCA technical committee and co-leads the "Emerging Compute Platforms ad-hoc", which focuses on adopting TOSCA as the Infrastructure-as-Code language for serverless applications. He is a member-at-large of the IEEE Conference Activities Committee.
